Welcome

to our latest Centrifuge range

Centrifuges focused on the future

Micro, small, medium, large & floor ambient with additional refrigerated versions.

Improved angled front panel for ease of use.

Improved rotors for safer sample use

Additional rotors, fixed angles, high speed fixed angles, swing out and micro.

Fixed angle rotors are now supplied with sealed lids, for ultimate safety.

Swing out rotors also have new sealed lids to increase their capacity.

Next generation components

- **Inverter**
 - Efficient with added power 33% better acceleration/deceleration
- **Tachometer /Imbalance**
 - Third generation offering improved user flexibility
- **Lid Lock system**
 - Superior lid locks for safety and reliability
- **Control Board**
 - Easier rotor selection with additional display
 - Bluetooth addition allowing latest software updates
 - Timer now 0-99mins, 2,3,4,5,6,7,8,9Hours and constant

Refrigerated Centrifuges

Dynamics rooted in innovation

Accuracy and control using less power.

How?

Centurion Scientific Ltd keep the compressor running constantly, sounds odd but this method increases compressor life and reduces power dramatically.

Constantly turning a compressor on and off means a huge surge of power on each action, plus poor temperature control. See graph below, to control the accuracy to an unprecedented level we balance and control with a heater. This is controlled by a PID system offering top level control.

Why?

Imagine using a shower, you turn on both hot water and cold to reach your desired temperature. You would not stand in cold water, then hot to regulate temperature. By using both cold and hot we “balance” the set temperature. As we have been using this method for over 27 years it is a proven technology.

Proof

See the graph below.

Centurion is set at 3C and a well known competitor at 4C to differentiate. As you can clearly see our system has control and repeatability beyond our competition.

Refrigerated Centrifuges

Dynamics rooted in innovation

Accuracy and control using less power.

How?

Centurion Scientific Ltd keep the compressor running constantly, sounds odd but this method increases compressor life and reduces power dramatically. Constantly turning a compressor on and off means a huge surge of power on each action, plus poor temperature control, see graph below To control the accuracy to an unprecedented level we balance and control with a heater. This is controlled by a PID system offering top level control.

Why?

Imagine using a shower, you turn on both hot water and cold to reach your desired temperature. You would not stand in cold water, then hot to regulate temperature. By using both Cold and Hot we “balance” the set temperature As we have been using this method for over 25 years it is a proven technology.

Proof

See the Graph below.

Centurion is set at 3C and a well known Competitor at 4C to differentiate. As you can clearly see our system has control and repeatability beyond our competition.

Refrigerated Centrifuges

Dynamics rooted in innovation

Accuracy and control using less power.

How?

Centurion Scientific Ltd keep the compressor running constantly, Sounds odd, but this method increases compressor life and reduces power dramatically. Constantly turning a compressor on and off means a huge surge of power on each action, plus poor temperature control. See graph below to control the accuracy to an unprecedented level we balance and control with a heater. This is controlled by a PID system offering top level control.

Why?

Imagine using a shower, you turn on both hot water and cold to reach your desired temperature. You would not stand in cold water, then hot to regulate temperature. By using both cold and hot we “balance” the set temperature As we have been using this method for over 27 years it is a proven technology.

Proof

See the graph below.

Centurion is set at 3C and a well known competitor at 4C to differentiate. As you can clearly see our system has control and repeatability beyond our competition
